## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-9 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The examiner considers the limitation "moving the bonding tool from the first position towards the first bonding point and applying a pressing force on the first bond with the wire but without forming a second bond of the wire" as new matter. (Emphasis added by the examiner).

In the response filed on 8/3/06, the applicant states that support for this limitation is found at page 5, line 31 through page 6, line 3 of the specification.

The examiner respectfully disagrees. Page 5, line 31 through page 6, line 3 of the specification states that:

"From point C<sub>1</sub>, the capillary 10 moves down towards the first bonding point A<sub>1</sub> to point D<sub>1</sub>. This motion presses the wire 12 down, preferably ensuring that the highest point of the wire loop 18 relative to the first bonding point is less than or equal to 2.35 times of the wire diameter. At point D<sub>1</sub>, the capillary 10 applies a predetermined force and ultrasonic energy onto the first bond to couple the wire 12 at the capillary opening to the first bond. This coupling process serves to prevent subsequent damage to the loop neck." (Emphasis added by the examiner).

According to this teaching, ultrasonic energy couples the wire to the first bond. The examiner considers the ultrasonic coupling of the wire to the first bond to be equivalent to "forming a second bond of the wire". Thus, it is the examiner's position that the specification does not provide support for the negative limitation of "without forming a second bond of the wire". (Emphasis added by the examiner). In other words, the specification does not support the step of solely "applying a pressing force on the first bond with the wire" but "without forming a second bond of the wire".

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-9 have been considered but are moot in view of the new ground(s) of rejection.
